## DETAILED ACTION

### *Drawings*

1. The drawings are objected to because the box diagrams in Figures 1, 2, 4, 11, 12, 16, 17, 20 and 21 lack descriptive labels. These labels serve an important purpose in aiding the search of the prior art should the application issue as a patent. Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

### ***Claim Rejections - 35 USC § 112***

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claims 1-13 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 1, line 10, "said empty area" lacks a proper antecedent basis since there is no prior mention of an 'empty area'.

***Allowable Subject Matter***

4. Claims 1-13 would be allowable if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action.

5. The following is a statement of reasons for the indication of allowable subject matter: the prior art of record such as Sakamoto et al. (US 6,185,212 B1) teach a pre-allocated two frames per connection memory structure (Figure 3), whereas applicant's invention provides a more dynamic allocation of the memory wherein set frame length areas are allocated based on the connection status (new or same) and the status of the frame for the same connection (cells of one frame already written or not).

Claims

1. *A communication control apparatus for collecting cells belonging to a same connection among a plurality of cells which are inputted, assembling a frame every connection, and outputting each of said frames as frame data, comprising:*

*a frame assembly memory having a plurality of areas which were set so as to correspond to a maximum one of a plurality of frame lengths which are handled;*

*a memory write control unit constructed in a manner such that when a cell of a new connection is inputted, said new connection is allocated to said empty area in said frame assembly memory to which the connection is not allocated yet and said cell is written therein, and on the other hand, when the cell of the same connection as the connection which has already been allocated to any of said areas is inputted, said cell is written into said area to which said connection has already been allocated, and if the cells of one frame have already been written in said area, said connection is allocated to another new area, and said input cell is written therein; and*

*a memory read control unit which reads out said collected cells of one frame from said frame assembly memory and outputs them as completed-frame data.*
